

SYSTRONIC CL830

THE COMPACT MAINTENANCE CLEANING

Immersion cleaning is still best suited for condensate traps, filters and system components.

With the CL830 single-chamber system, SYSTRONIC offers the solution for maintenance cleaning. Soldering frames and devices can also be cleaned in the system.

A pressure circulation system with effective aerator support

ensures impressive cleanliness of the components in this semi-automatic process. A large tank volume and a simple design of the system also keep the maintenance effort within limits.

Of course, the size of the system can be adjusted and is optionally available including rinsing and drying.

A cost-effective process with impressive results!

THE PROFESSIONAL HELP FOR YOUR MAINTENANCE CLEANING - SYSTRONIC CL830

Technical data CL830

Single-chamber system

External Dimensions

Height 1000 mm
 Width 1860 mm
